

```
\pgfdeclarehorizontalshading{myshadingA}
{1cm}{rgb(0cm)=(1,0,0);
color(2cm)=(green); color(4cm)=(blue)}
\pgfuses shading{myshadingA}
```

```
\node {root}
child {node {left}}
child {node {right}}
child {node {child}}
child {node {child}}
};
```

```
\begin{tikzpicture}[line width=20pt]
\useasboundingbox (0,-1.5) rectangle
(3.5,1.5);
\draw[red] (0,0) -- (3,0);
\draw[gray,->] (0,0) -- (3,0);
\end{tikzpicture}
```

How do I typeset an entire document in sans-serif, e.g. Helvetica, without littering the document with font changes for every heading/paragraph, etc.? Like in How to set the font for a title (and chapter etc), but with the paragraphs all in sans-serif.

For example, I've seen documents typeset in Computer Modern and then switched to Palatino, but can I do the same with Helvetica with a few commands at the beginning?

(And please don't tell me to use a serif font for body copy / paragraphs. I know. I'm trying to use latex to typeset my resume to look like the one I've created in a word processor, which is hard to maintain but looks good. I'm hoping latex will let me do more advanced formatting/layout, separating content from form.)
